CITY OF JEFFERSON
STANDARD DRAWINGS
REVISED EDITION: 1/2013

CONSTRUCTION SEQUENCE

1. PLACE BEDDING MATERIAL TO GRADE.
2. COMPACT BEDDING OUTSIDE THE MIDDLE THIRD OF THE PIPE.
3. INSTALL PIPE TO GRADE.
4. PLACE AND COMPACT THE HAUNCH AREA UP TO THE SPRINGLINE.
5. COMPLETE BACKFILL ACCORDING TO SPECIFICATIONS.

LEGEND

= UNDISTURBED SOIL

TYPICAL TRENCH DETAIL FOR H.D.P.E. PIPE INSTALLATION

ALL H.D.P.E. PIPE SHALL HAVE WATER TIGHT GASKET CONNECTIONS

TABLE I HIGH DENSITY POLYETHYLENE PIPE			
SPECIFIED DIA OF PIPE (IN.)	MIN OVERFILL HEIGHT (FT)	MAX OVERFILL HEIGHT* (FT)	MIN. TRENCH WIDTH (IN.)
12	1	38	34
15	1	39	38

SHEET NUMBER 1 OF 1 SECTION 30.02		

STORMWATER NOTES:

- Dimensions "L" and "W" given on plans as "L" x "W" (typ.).
- Dimensions of upstream and downstream gutter transitions shall be as detailed unless otherwise specified on the plans.
- Gutter transitions on inlets in a sump shall be 10' on both sides of inlet unless otherwise specified on the plans.
- Gutter transitions shall be transition uniformly between standard curb and gutter and the inlet wall.
- Expansion joints and dowel placement between curb and gutter and inlet transition shall be the same as that shown on Type "A" Curb and Gutter detail.
- Gutter deflectors (see detail) are required when street slope is 5% or greater.
- After initial set, remove deflector channel forms and finish surface of concrete.
- Ring and cover casting (NEENAH R-5900-F typ. see detail) should be located on the downstream side of curb inlet lid.
- Use 3/4" chamfer strip on all exposed concrete corners.
- Curb inlets shall include an edge angle assembly with trash rod (see detail).
- Inlets shall have a 4" weep hole in every side which also contains a stormwater pipe. The weep holes shall be covered with a 12" x 12" filter fabric reinforced by a similarly sized piece of geogrid or wire fabric. The fabric and grid should be firmly attached to the outside of the inlet wall with mastic or by other approved means.
- All inlets shall have inverts installed to provide for the smooth transition of water to the outlet pipe (see MoDOT typical invert details)
- All reinforcement steel shall be 1 1/2" clear of concrete surface, unless otherwise shown.
- Reinforcing steel shall be bent around pipe opening when possible. If steel is cut, a diagonal bar shall be used to tie all cut ends together.
- Where the concrete lid is integral to the sidewalk (i.e. part of the sidewalk), #4 bars shall be installed on 12" centers to tie into the sidewalk and lid. In the case that the concrete lid is within 18" of the edge of the sidewalk, the lid shall be extended to the edge of the sidewalk.
- Precast lids shall not be used.
- Inlet lid shall be sloped to match the longitudinal slope of the street.
- Pan shall be paid as Type "A" Curb and Gutter for City of Jefferson Projects

EDGE ANGLE ASSEMBLY NOTES

- Edge angle assembly shall be structural steel. Exposed steel surfaces shall be finished smooth and hot dip galvanized after fabrication.
- Nails or bolts used to anchor angle to form shall be removed or cut off flush with surface of angle.
- Where center support is required (L = 8' - 0" and 11' - 0") shim under center support plate as needed and spade concrete solid under base angles.
